

## CASE INDEX

---

- Case 1: Netherton Syndrome
- Case 2: Aplasia cutis congenita associated with fetus papyraceus
- Case 3: Wong-type dermatomyositis
- Case 4: KANK2-associated palmoplantar keratoderma with woolly hair
- Case 5: Novel use of topical tofacitinib for treatment of discoid lupus erythematosus
- Cases 6A/6B: Anti-TIF1-gamma antibody dermatomyositis in skin of color
- Case 7: Mycobacterium abscessus
- Case 8: Refractory Mycobacterium chelonae
- Case 9: Leprosy: Hansen's Disease
- Case 10: Pancreatitis, panniculitis, and polyarthritis syndrome (PPP)
- Case 11: Stage IV diffuse large B-cell lymphoma, germinal center origin
- Case 12: Complex aphthosis resolved with apremilast
- Case 13: Keloid scars successfully treated with systemic and intralesional dupilumab
- Case 14: Minocycline-induced antiphospholipid antibody syndrome
- Case 15: Basaloid follicular hamartoma with superimposed basal cell carcinomas
- Case 16: Cutaneous metastatic breast cancer
- Case 17: Multiple hereditary infundibulocystic basal cell carcinoma syndrome
- Case 18: Recurrent granulomatous dermatitis disorder
- Case 19: Atypical spitz tumor
- Case 20: Follow-up case: Cutaneous actinomycosis arising in a keloid
- Case 21: Follow-up case: Reactive granulomatosis responsive to tocilizumab therapy
